Midwest Energy opts to keep *SOSRemote* as their Wireless Solution

Hays, KS - February 1, 2012

InsightAtlast, LLC is pleased to announce that Midwest Energy, Inc. will retain *SOSRemote* as their mobile workforce wireless solution despite previous plans to consolidate all their computing needs with a single vendor via Cayenta, a division of N. Harris Computer Corporation. *SOSRemote* is one of the software modules that comprise InsightAtlast's *SOSMobile* suite.

An InsightAtlast client since 2002, Midwest Energy, headquartered in Hays, Kansas, is a customer-owned electric and natural gas company serving nearly 90,000 customers in central and western Kansas. Due to their remote service territories, connectivity is an issue for them. When they began using *SOSRemote*, they found it to be the perfect solution. It allowed their service personnel to download/upload orders when a connection was available, and continue to work on the orders when there was no connection.

When Midwest announced in March of 2009 that they were contracting with Cayenta as their one-vendor computing solution, it looked as if their long-term relationship with InsightAtlast would be coming to an end. InsightAtlast is delighted that Midwest opted to maintain their successful relationship and the successful solution *SOSRemote* offers.

"*SOSRemote*'s design is logical, easy to set up, and very stable", states Annie Schmidtberger, Software Technology Specialist at Midwest. "With its simple screens and wizards, it allows our service techs to spend more time completing orders rather than getting bogged down with data entry. Further, InsightAtlast's support is fantastic. I'm thrilled we're continuing this relationship!"

InsightAtlast is in the process of integrating the *SOSRemote* module to Midwest's new Cayenta Utilities CIS. This represents the fourth unique CIS integration for *SOSMobile*.
